

HOMWORK III - DEEP LEARNING

In this homework, I will build a recurrent neural network (RNN) for character-level language model using tensorflow library. I also will try to build GRU and LSTM model to compare the results of them.

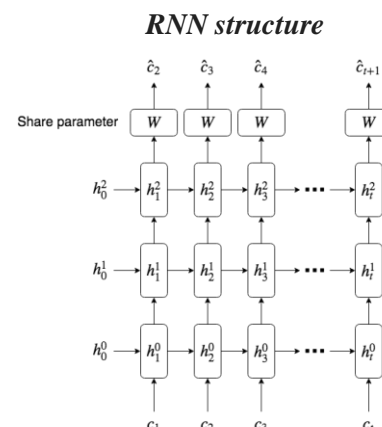

To train RNN model, I will proceed to follow these steps:

- Read data (shakespeare_train.txt for training and shakespeare_valid.txt for validation)
- Process the text: vectorize text, create targets from text, create training batches
- Build model (RNN, GRU, LSTM)
- Train the models
- Using the trained models to generate new text.

I. RNN

1. Network structure

Layer (type)	Output Shape	Param #
embedding (Embedding)	(1, None, 256)	17152
simple_rnn (SimpleRNN)	(1, None, 1024)	1311744
dense (Dense)	(1, None, 67)	68675
Total params: 1,397,571		
Trainable params: 1,397,571		
Non-trainable params: 0		

- In this homework, **instead of using one-hot vector, I used an embedding layer**, which is use a vector of size 256 to represent a character, which is easy to extend to a word-level.

Parameters for training			
Batch size	64	Size of sequence:	100
Number of epochs	30	Time per epochs:	~120s

IV. Compare RNN/GRU/LSTM with different size of sequence length and hidden state

	#hidden state	Sequence Length	#params	Accuracy Train	Accuracy Validation	Loss Train	Loss Validation
RNN	1024	100	1.397.571	60.01%	55.21%	1.29	1.52
RNN	1024	50	1.397.571	59.79%	53.18%	1.42	1.59
RNN	512	100	445.251	59.31%	54.93%	1.33	1.51
GRU	1024	100	4.022.340	62.18%	55.81%	1.22	1.51
GRU	1024	50	4.022.340	56.91%	53.27%	1.41	1.58
GRU	512	100	1.234.243	62.20%	56.85%	1.21	1.46
LSTM	1024	100	5.332.803	67.42%	55.30%	1.06	1.61
LSTM	1024	50	5.332.803	62.23%	54.34%	1.23	1.59
LSTM	512	100	1.628.483	63.08%	55.59%	1.19	1.54

From the comparison table above, we can clearly see that using **LSTM layer can get the better result** when compare with RNN or GRU layer. However, when we train model with lager epochs, model will be **easier overfitting**, so to avoid overfitting we can use earlier stopping, add penalty norm L2 to objective function J or use Drop out technique .

 You can see leaning curve of all of model above in folder: **training_curve**
